

RESET

THE NEXT GENERATION OF INNOVATORS

RESET provides educators with summer research experience at participating Army Laboratories. The goal of this enriching program is to reinforce teachers' content knowledge through research experience and interactions with Army and Department of Defense scientists and engineers. Selected teachers will participate in online learning as a cohort, with a subset of the cohort selected to conduct research on-site with a mentor Army scientist or engineer. At the completion of the program, teachers will be able to translate this knowledge and experience into enhanced STEM research curricula and enriched learning for their students.

RESET is designed for high school and upper middle school teachers of science, math and/or career technical education (CTE) including engineering and other topics closely related to STEM.

IMPORTANT DATES

AUGUST 17, 2020

Module 1 Teacher Application opens

OCTOBER 2, 2020

Module 1 Teacher Application closes
